TESTING EXPERIENCE

Linnify– QA Engineer

I learned more about web testing, and worked on different projects. My technical skills improved and I became better at identifying and documenting bugs. My responsibilities included: Manual testing strategy, Functionality testing, Regression testing, Bug validation, Exploratory and Test automation. I also learned to use Jira and testrail for test and project management.

Azimut Vision – Automation Testing Course

I learned the basics of setting up automation testing with tools like Selenium and Junit. Since getting my state approved certification, I have been growing my skills and learned more about selenium and how you can use it in different contexts.
I also have basic knowledge of html, css and SQL. Persistence is the road to success and I am practicing and improving my skills everyday.

Manual testing experience

Self though manual tester. I learned different techniques for manual testing such as : Equivalence partitioning, Boundary Value Analysis, State Transition Testing and so on. I also learned about different types of testing such as: Smoke Testing, Security Testing , Stress Testing, Acceptance Testing, Api testing and so on.

Occasional Test Conferences and Events

I participate in occasional test related events in the community.
